
Passive Anti-theft System (PATS) (33)

Passive Anti-theft System (PATS)

The newly introduced passive anti-theft system (PATS) prevents the vehicle from being driven away by unauthorized persons.

No wiring diagrams will be published for this system to prevent any information from reaching third parties. The FDS 2000 diagnostic tester should be used to diagnose any problems which may occur to the PATS system.

If the problem still cannot be solved in some special cases, more information can be obtained from the service "hotline".
